PROFESSIONAL SUMMARY

Java Full Stack Developer with **2.1+ years** of hands-on experience in designing, developing, and deploying scalable web applications for **banking and financial domain**. Proficient in building secure **RESTful APIs** using **Spring Boot**, implementing **JWT-based authentication and RBAC** with Spring Security, and developing dynamic single-page applications using **React.js and Angular**. Experienced in database design, query optimization, transaction management, and **Docker-based containerization**. Adept at working in **Agile/Scrum** environments with JIRA-driven sprint cycles and Git-based version control workflows.

TECHNICAL SKILLS

Languages :	Java (Core Java, Java 8/17), JavaScript, TypeScript, SQL.
Backend :	Spring Boot, Spring MVC, Spring Data JPA, Hibernate ORM, Spring Security, RESTful API Design, Exception Handling, Bean Validation, Lombok, MapStruct, Maven.
Frameworks :	
Frontend Technologies :	React.js 18 (Hooks, Context API, Axios), Angular (Components, Services, Modules, RxJS, HttpClient, Reactive Forms), HTML5, CSS3, Bootstrap 5.
Security :	SpringSecurity, JWTAuthentication, OAuth2, Role-BasedAccessControl(RBAC), SecureRESTAPI Design, Filter Chain Configuration.
Databases & Storage :	MySQL, PostgreSQL, Redis, Schema Design, Normalization, Indexing, Query Optimization, Transaction Management.
Tools Tools & :	IntelliJ IDEA, Eclipse, VS Code, JIRA, Agile/Scrum, Git Branching Strategy, SonarLint
Methodology Core Concepts :	OOP, SOLID Principles, Collections Framework, Multithreading, Design Patterns (Singleton, Builder), Microservices Architecture.

PROFESSIONAL EXPERIENCE

Java Full Stack Developer
Sofrego Pvt. Ltd.

March 2024 – Present
Pune, Maharashtra

- Responsible for designing and developing modular, production-grade backend services using **Spring Boot** following clean layered architecture (Controller, Service, Repository) for banking domain applications.
- Designed and implemented secure **RESTful APIs** with proper request validation, centralized exception handling, and structured error responses adhering to REST standards.
- Implemented **JWT-based stateless authentication** and **Role-Based Access Control (RBAC)** using **Spring Security**, securing endpoints based on user roles and access levels.
- Developed interactive frontend modules using **React.js** and **Angular** including dashboards, forms, and data tables integrated with backend REST APIs.
- Implemented **database transaction management** using @Transactional for critical financial operations ensuring atomicity, consistency, and rollback on failure.
- Performed **query optimization** using indexing strategies, lazy loading in Hibernate, and pagination to improve API performance under high data volumes.
- Containerized application services using **Docker**, created Dockerfile configurations for local and staging environment consistency.
- Wrote **unit and integration tests** using **JUnit 5** and **Mockito** for service-layer logic, maintaining code reliability and reducing regression bugs.
- Maintained **Swagger/OpenAPI 3** documentation and Postman collections for all APIs; collaborated with QA and frontend teams for smooth integration.
- Followed **Agile/Scrum methodology** with bi-weekly sprints, daily standups, and JIRA-based task management; practiced Git branching (feature, hotfix, main) with peer code reviews.

PROJECTS

NexLedger — Core Banking Account & Transaction Management System

Domain: Banking / Financial Services | Type: Professional Project

TechStack: Spring Boot , Spring Security, React.js, MySQL, JWT, JUnit 5, Docker

Roles & Responsibilities:

- Responsible for developing **RESTful APIs** for core banking operations: account creation, balance inquiry, fund transfer, mini-statement, and paginated transaction history with dynamic filtering
 - Implemented **JWT-based authentication** and **RBAC** for three user roles (Admin, Manager, Customer) using Spring Security filter chain with custom UserDetailsService.
 - Applied business rule validations for transfer limits, duplicate transaction prevention, and account status checks; handled edge cases with global exception handler returning structured error DTOs.
 - Designed normalized **MySQL schema** for accounts, transactions, and audit logs with referential integrity; applied indexing on frequently queried columns to reduce query execution time.
 - Built **React.js** dashboard with account summary cards, fund transfer form, and paginated transaction table; integrated with backend APIs using Axios with JWT header injection.
 - Containerized backend and frontend services using **Docker**; wrote service-layer unit tests using **JUnit 5 and Mockito** covering transfer and validation logic.
-

StudyHive — Online Study Discussion & Knowledge Sharing Platform

Domain: EdTech | Type: Personal Project

TechStack: Spring Boot, Angular, MySQL, JWT, Spring Security, Bootstrap 5

Roles & Responsibilities:

- Responsible for end-to-end design and development of a knowledge-sharing platform using **Spring Boot** backend and **Angular 16** frontend with JWT-secured REST APIs.
 - Implemented user registration, JWT-based login, and role-based feature access for Student and Moderator roles; configured Angular route guards for protected navigation.
 - Developed modules for post creation, threaded comments, upvoting, and tag-based content discovery; implemented **server-side pagination and keyword search** for scalable content retrieval
 - Designed relational **MySQL schema** for users, posts, comments, votes, and tags using JPA entity relationships (OneToMany, ManyToMany); implemented global exception handling with HTTP status mapping
 - Built reusable **Angular components** (post card, comment thread, sidebar) using **RxJS Observables** and **HttpClient** for reactive API integration; responsive layout using Bootstrap 5
-

EDUCATION

2021 – 2025

Bachelor of Technology (B.Tech)

Punyashlok Ahilyadevi Holkar Solapur University

Year Of Completion- 2025

CERTIFICATIONS- java Full Stack Development
